Bromadiolone 0.005% RB

Is a highly effective urban rodenticide designed for the control of rodents and mice.

For control of:

- Rats/ Mice/ Mouse

With its potent active ingredient, RUN-RAT provides reliable, long-lasting control, ensuring a pest-free environment. Ideal for urban settings, it ensures efficient rodent management and peace of mind.

Always read and follow label instructions.

RUN-RAT: ULTIMATE RODENT CONTROL FOR A CLEANER, SAFER SPACE

Active Ingredient: Bromadiolone 0.005% RB

Features:

- Second-generation anticoagulant that is effective against rats and mice
- There is no pain involved so the rodent does not associate their condition with the bait, and will return to feed
- Anticoagulants are considered a low hazard to people and pets.
- Delay in the onset of symptoms allows for time to prevent serious consequences in the case of accidental poisonings in humans, pets, or wildlife.

Mode of Action: Acts by disrupting the normal blood clotting mechanisms causing an increased tendency to bleed.

Recommended Dose:

- Placement: Place the bait inside RBT or rodent burrows only
- Quantity: Use 20-50 grams per bait station

Antidote:

Vitamin K1 is a readily available antidote for anticoagulant poisoning.

Packing: 25 gm, 100 gm

Always read and follow label instructions.
